Research's Objectives

set up a tool dedicated to the conception and the evaluation of architectural and urban planning projects within the scope of sustainable development objectives and reduced environmental impacts

place the tool at the beginning of the project to help the designer to improve the whole procedure

conceive the tool as an evolving one which will gradually be adjusted and improved

Supérieure à 170 kWh/m2 an

réponse à choix unique

Some elements of the followed method

an evaluation method asking a series of questions to assess if the project is taking the way of sustainability or not

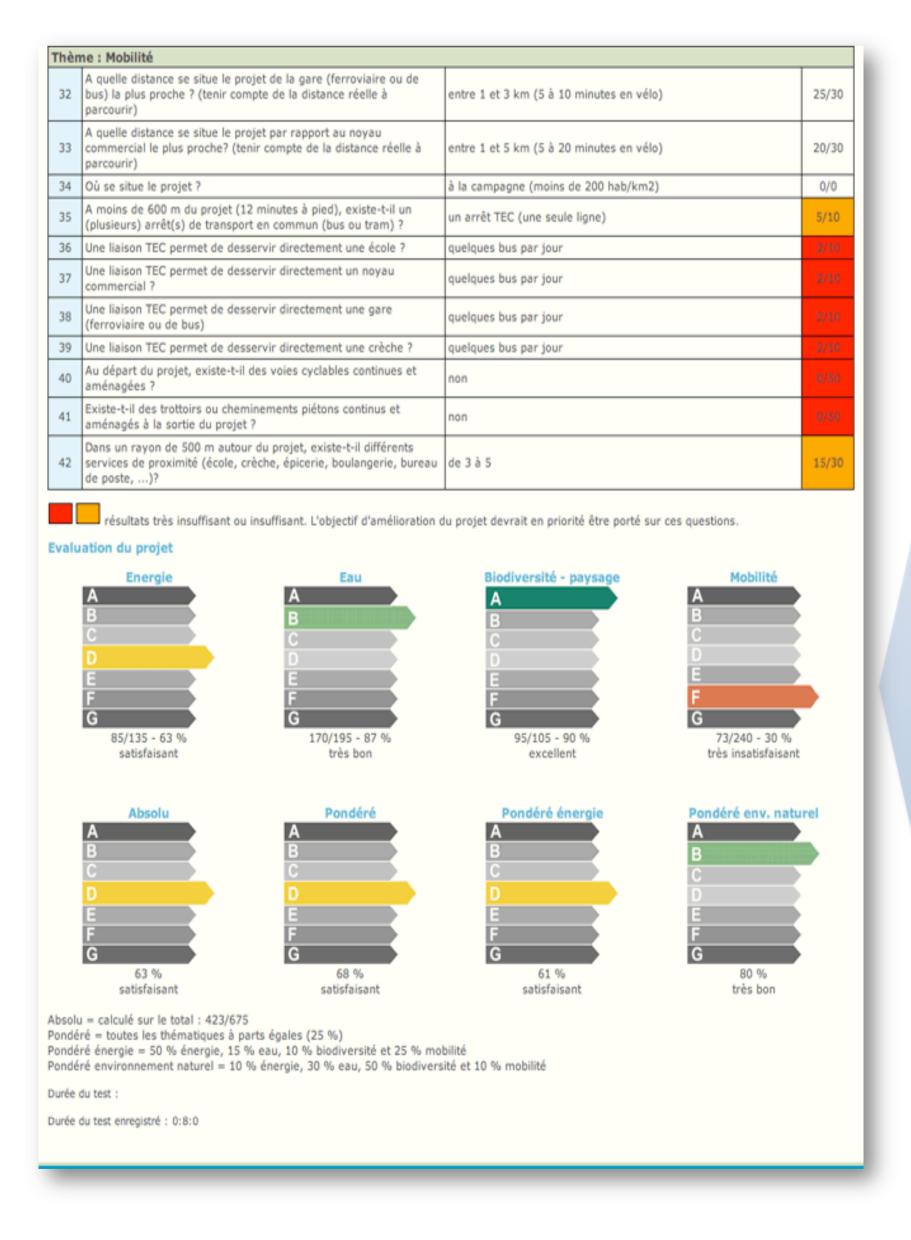

for now, this research is only considering new building projects

questions have been classified in four categories :

Questionnaire - Energie

Quelle est la CONSOMMATION moyenne d'énergie primaire (kWh/m2) des bâtiments (chauffage + eau

Outcome

A dynamic website with associated databases: http://cpdt.wallonie.be/urba/

A "test" section that enables the assessment of a project by way of a questionnaire;

at the end of the test, goals to achieve and associated propositions are formulated to help enhancements regarding sustainability and environmental impacts in particular.

A "guideline" section which helps to improve the project proposal with:

- fact sheets,
- references,
- Internet links,
- exemples of good practices.

The **CPDT** (Conférence Permanente du Développement Territorial : Standing Conference regarding Land Use and Planning in Wallonia, Be) has been created in 1998 and is financed by the Wallonian Region of Belgium. Its missions are related to multidisciplinary researches in the field of building and land use planning. Two laboratories have been associated to the present research: the **LEPUR** (for the University of Liège) and the **CREAT** (for the Catholic University of Louvain). http://cpdt.wallonie.be
